Hier sehen Sie die IP Portliste sowie die Dienste.

Die IP-Portliste in der Übersicht, über die am häufigsten verwendeten Protokolle und deren Ports. Jeder TCP/IP Anwendung ist eine eigene Portnummer zugeordnet

(Bsp.: HTTP, FTP, usw.) Diese Portnummern werden als bekannte "Portnummern" bezeichnet, da sie von der IANA (Internet Assigned Numbers Authority) veröffentlicht wurden. Sie ermöglichen das Entwickeln von Applikationen, die auf häufig benutzten Dienste zugreifen (Bsp.: Email). Ports sind Adressen an einem Server oder Rechner. Sie werden bei einer Datenverbindung jeweils angesprochen und werden auch als "Dienstanschlüsse" bezeichnet, weil durch sie eine bestimmte Anwendung auf einem Rechner aufgerufen wird. Portadressen sind in drei Gruppen unterteilt.

Dies sind die "well known Ports", die "registered ports" und die "dynamic and/or private ports".

- Die "well known Ports" haben den Adressierungsbereich 0 bis 1023
- Die "registered ports" haben den Adressierungsbereich 1024 bis 49151
- Die "dynamic and/or private ports" haben den Adressierungsbereich 49152 bis 65535

Destination Ports : Jedes TCP Segment enthält den Quell- und Zielport. Damit ein Prozess einen anderen Prozess auf einem entfernten Host ansprechen kann, muss die IP-Adresse des Hosts und die Portnummer des Prozesses bekannt sein. Die IP-Adresse kann per DNS herausgefunden werden. Die Portnummer ist eine Nummer für einen SAP (service access point) über den TCP mit den Prozess Daten austauscht. Üblicherweise wird ein Client versuchen, einen Dienst mit einer well-known Portnummer zu erreichen. Bestimmte Prozesse müssen deswegen well-known Portnummern haben, weil, wenn der Client-Prozess die Portnummer unter der der andere Prozess zu erreichen ist nicht weiß, er diesen auch nicht adressieren und somit kontaktieren kann. Bestimmte Applikationen verwenden Portnummern, die ihnen fest zugeordnet, allgemein bekannt und üblicherweise zwischen 1 und 1024 liegen. Diese werden als well-known bezeichnet. Es sind standardisierte Portnummern und jeder Prozess kennt sie.

Häufig verwendete Ports: (Beispiele)

Port | Name Bezeichnung des Protokolls

- 1 | TCP Port Service Multiplexer
- 2 | TCP/UDP Management Utility
- 3 | TCP/UDP Compression Process

5 | TCP/UDP Remote Job Entry
7 | TCP/UDP Echo
11 | TCP/UDP Systat Active Users
13 | TCP/UDP Daytime
17 | TCP/UDP Quote of the Day
18 | TCP/UDP Message Send Protocol
19 | TCP/UDP Character Generator
20 | TCP/UDP File Transfer (FTP) [Default Data]
21 | TCP/UDP File Transfer (FTP) [Control]
22 | TCP/UDP SSH Remote Login Protocol
23 | TCP/UDP Telnet
25 | TCP/UDP Simple Mail Transfer (SMTP)
27 | TCP/UDP NSW User System FE
29 | TCP/UDP MSG ICP
31 | TCP/UDP MSG Authentication
33 | TCP/UDP Display Support Protocol
37 | TCP/UDP Time
38 | TCP/UDP Route Access Protocol
39 | TCP/UDP Resource Location Protocol
41 | TCP/UDP Graphics
42 | TCP/UDP Host Name Server
43 | TCP/UDP Whois
44 | TCP/UDP MPM FLAGS Protocol
45 | TCP/UDP Message Processing Module [recv]
46 | TCP/UDP MPM [default send]
47 | TCP/UDP NI FTP
48 | TCP/UDP Digital Audit Daemon
49 | TCP/UDP Login Host Protocol (TACACS)
50 | TCP/UDP Remote Mail Checking Protocol
51 | TCP/UDP IMP Logical Address Maintenance
52 | TCP/UDP XNS Time Protocol
53 | TCP/UDP DNS (Domain Name Server)
54 | TCP/UDP XNS Clearinghouse
55 | TCP/UDP ISI Graphics Language
56 | TCP/UDP XNS Authentication
58 | TCP/UDP XNS Mail
61 | TCP/UDP NI MAIL
62 | TCP/UDP ACA Services
63 | TCP/UDP whois++
64 | TCP/UDP Communications Integrator (CI)
65 | TCP/UDP TACACS-Database Service
66 | TCP/UDP Oracle SQL*NET
67 | TCP/UDP Bootstrap Protocol Server
68 | TCP/UDP Bootstrap Protocol Client
69 | TCP/UDP Trivial File Transfer
70 | TCP/UDP Gopher
71 | TCP/UDP Remote Job Service
72 | TCP/UDP Remote Job Service
73 | TCP/UDP Remote Job Service
74 | TCP/UDP Remote Job Service
76 | TCP/UDP Distributed External Object Store

78 | TCP/UDP vetTCP
79 | TCP/UDP Finger
80 | TCP/UDP World Wide Web (HTTP)
81 | TCP/UDP HOSTS2 Name Server
